

How to buy Dentacoin (DCN) with Ether (ETH) using MetaMask

ATTN: Don't try to buy Dentacoin (DCN) by sending Ether (ETH) to our contract from any exchange platform as your assets could be lost. Instead, follow the instructions below.

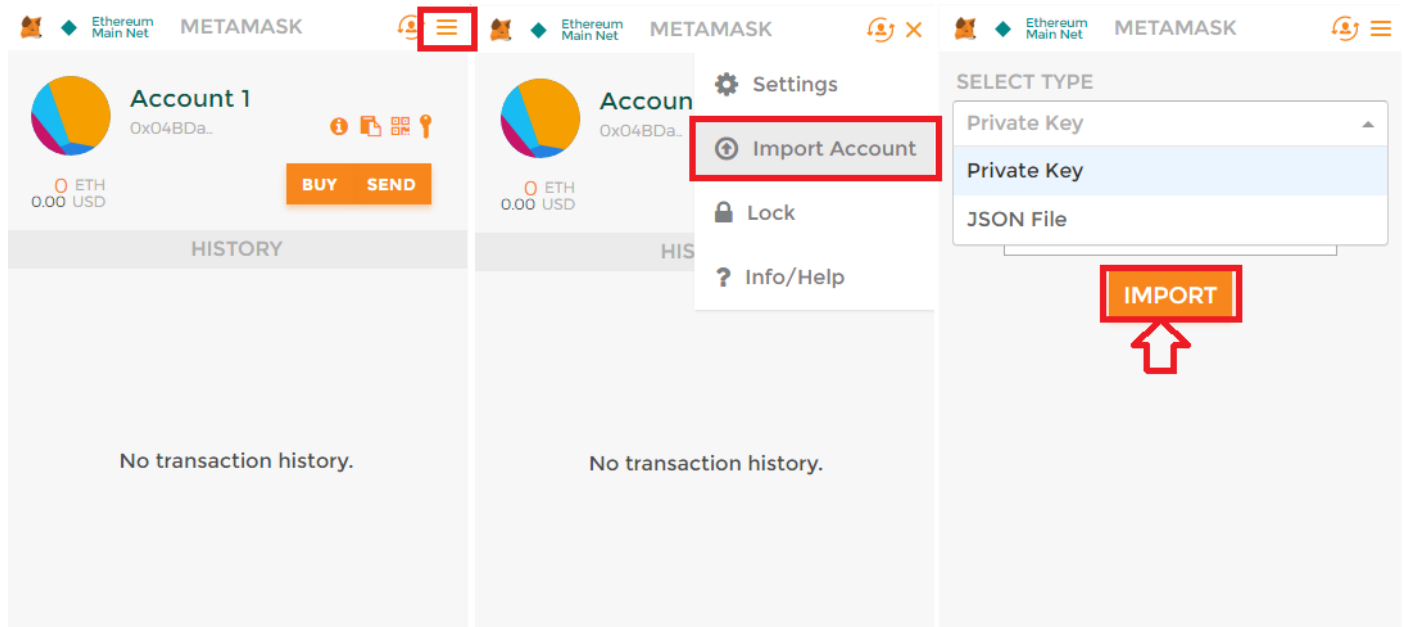

1. Get the MetaMask plugin for Google Chrome here: <https://metamask.io/>. If you see the MetaMask fox in the upper right corner of your browser, then the installation has been successful.

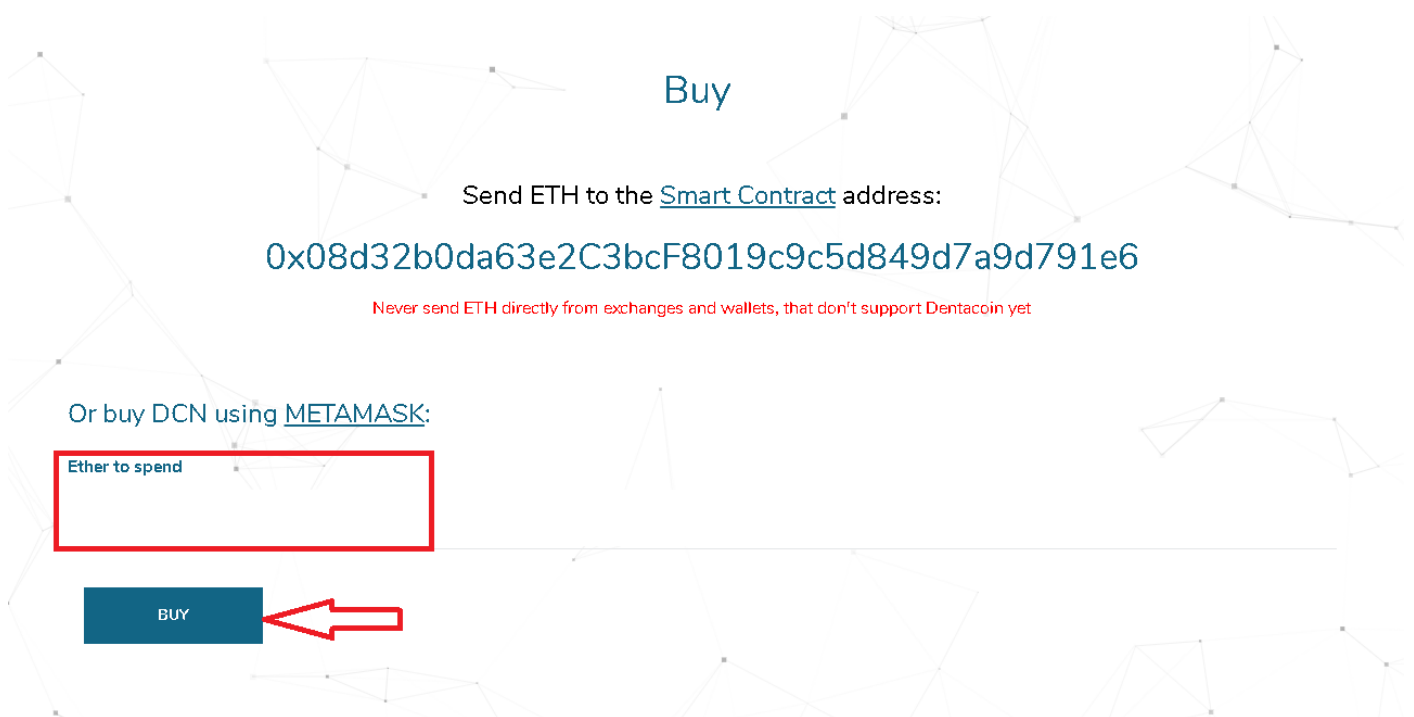

2. After adding the extension to Chrome, you will be forwarded to this page: <https://metamask.io/#how-it-works>. Make sure you watch the video there as it shows you how to use MetaMask for creating a new wallet (it should be sufficient to watch the video till 0:50). **ATTN:** When creating a new wallet, make sure you keep your password and the generated twelve-word phrase in a safe place!
3. Before making any transactions, make sure you are operating in the Ethereum Main Net.

4. You can also import your already existing wallet to MetaMask by pasting your private key or uploading your JSON File.

5. All set? Go to www.dentacoin.com/ico/. Scroll down until you see the section Buy. Then enter the amount of ETH you would like to spend for buying Dentacoins and click on the "Buy" button. **ATTN:** In order to buy Dentacoin, you should have a certain amount of Ether (ETH) in advance. You don't have Ether (ETH)? You can buy it on platforms like: [Bitpanda](#), [Coinbase](#), [Kraken](#), [Poloniex](#), [Bittrex](#), [Ether Rush](#) (India) and then just transfer it to your wallet.

6. Well, that's just it. Welcome on board! Now you can check you DCN balance by scrolling up to the section Balance here: www.dentacoin.com/ico/

Security recommendation!

MetaMask is an appropriate option for storing your DCN. For a next level of security, you can consider a hardware wallet such as TREZOR or Ledger Nano S.
