

How to buy Dentacoin (DCN) with Ether (ETH) using imToken

ATTN: Don't try to buy Dentacoin (DCN) by sending Ether (ETH) to our contract from any exchange platform as your assets could be lost. Instead, follow the instructions below.

1. Download the imToken app from [Google Play](#) or [App Store](#).
2. Once you've installed the app, create a new Ethereum wallet or import an existing one. If you decide to create a new wallet, please backup the wallet immediately. Create a strong password and make sure you set up a proper hint for it. Save your private key and please, keep it in a safe place, preferably both digitally and printed (Paper Wallet).

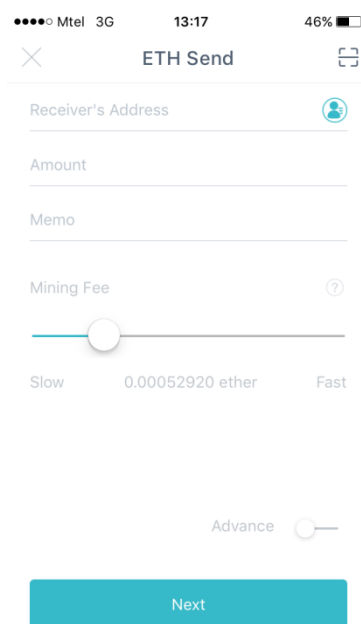

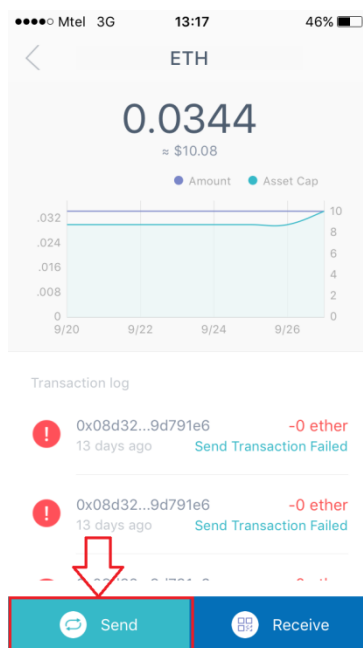

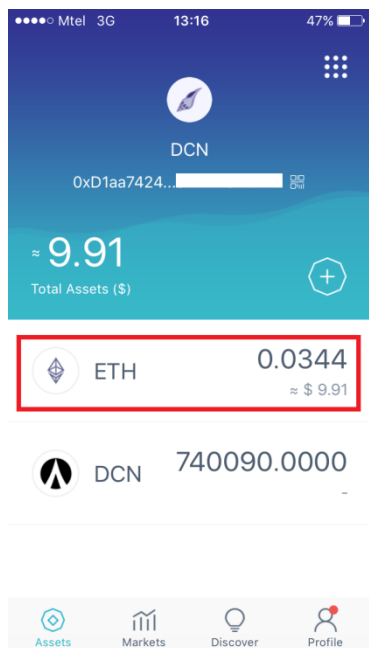

IMPORTANT! The private key is the most important data for accessing your wallet. If you lose it, there is no way it could be restored. EVER.

3. From the "Assets" tab, click the "+" icon, switch on DCN token so that you can check the amount of Dentacoins you own afterwards.

4. Ready to buy DCN? Click on ETH from your asset list. On the bottom of the screen you will see "Send" and "Receive" buttons. Click on "Send".

ATTN: In order to buy Dentacoin, you should have a certain amount of Ether (ETH) in advance. You don't have Ether (ETH)? You can buy it on platforms like: [Bitpanda](#), [Coinbase](#), [Kraken](#), [Poloniex](#), [Bittrex](#), [Ether Rush](#) (India) and then just transfer it to your wallet.

5. On the third screen above please fill in the following:
- 5.1. Receiver's Address: 0x08d32b0da63e2C3bcF8019c9c5d849d7a9d791e6
 - 5.2. Amount: the ETH amount you would like to exchange for DCN.
 - 5.3. Memo: this is just a field for notes; you can leave it empty.
 - 5.4. Mining Fee: it is recommended to change it to "Fast" so that your transaction goes through.

Click on the "Next" button and confirm your transaction.

6. Well, that's just it. Welcome on board! After the transaction has been processed, you must see your DCN in the "Assets" section.

Security recommendation!

imToken is an appropriate option for storing your DCN. For a next level of security, you can consider a hardware wallet such as TREZOR or Ledger Nano S.
