

# HOW TO CREATE A WALLET

1. You can easily create a crypto wallet at [www.myetherwallet.com](https://www.myetherwallet.com). After entering a strong password (min. 9 characters) and clicking on "Generate Wallet," you will be redirected to a new page.

<https://www.myetherwallet.com>

MyEtherWallet Open-Source & Client-Side Ether Wallet · v3.5.0 English ▾ ETH-beta (MyEtherWallet) ▾

[Generate Wallet](#) [Send Ether & Tokens](#) [Swap](#) [Send Offline](#) [Contracts](#) [View Wallet Info](#) [Help](#)

## Generate Wallet

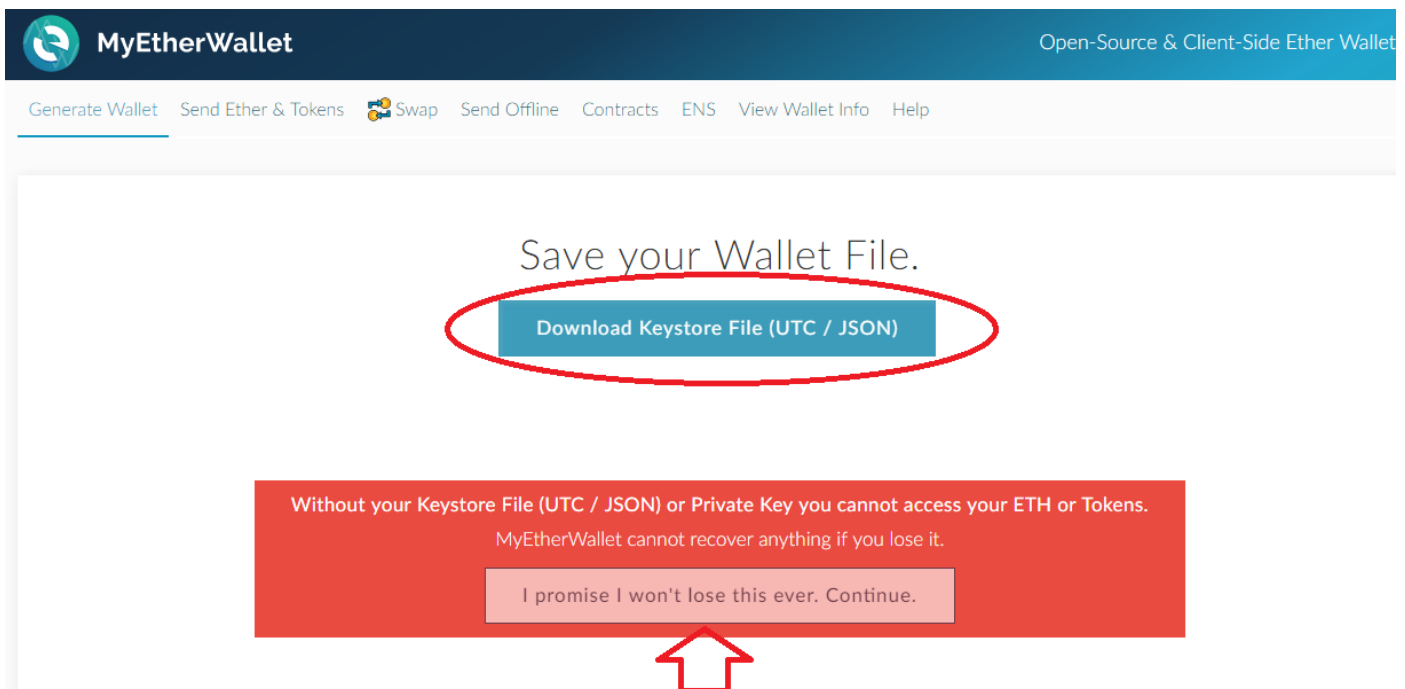

Enter a strong password (at least 9 characters)

Do NOT forget to save this!

Generate Wallet

Generate Wallet

2. Please, save the generated Keystore File (UTC / JSON) - it is a backup of your wallet. Then declare that you will never lose it (by clicking on the red button).

## Save your Wallet File.

Download Keystore File (UTC / JSON)

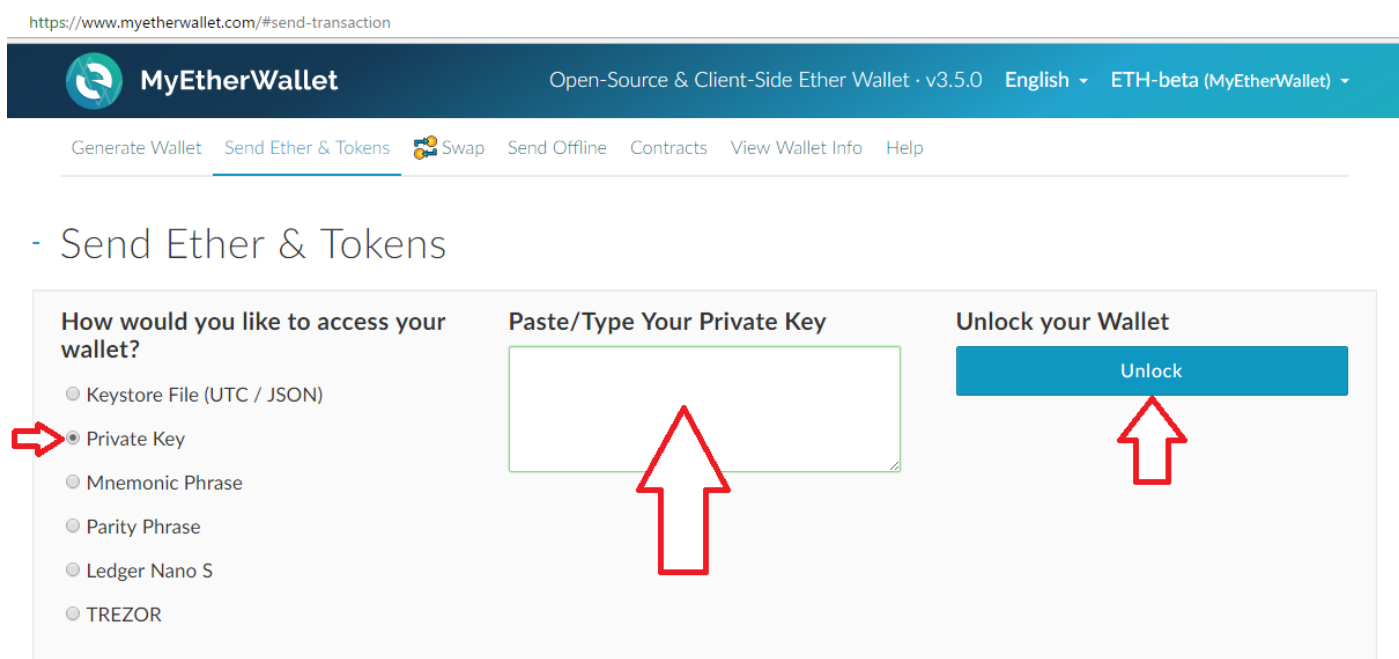

Without your Keystore File (UTC / JSON) or Private Key you cannot access your ETH or Tokens.  
MyEtherWallet cannot recover anything if you lose it.

I promise I won't lose this ever. Continue.

3. Once you save the file, you will be redirected to a page with an automatically generated Private Key. Please, keep it in a safe place, preferably both digitally and printed (Paper Wallet).
4. **IMPORTANT!** These is the most important data for accessing your wallet. If you lose it, there is no way it could be restored. EVER. When done, click on "Next: Save your Address".

4. Now is the time to open your wallet for the first time. Choose to unlock your wallet with a Private Key, place it in the specified field and click on the "Unlock" button.

5. Automatically, down on the same page, you will see newly generated fields containing Address (this is something like the IBAN of your bank account, make sure you have kept it in a safe place - again in digital and print version), Private Key, Keystore file, QR code, Paper Wallet. Now you have another chance to keep this important information!

**IMPORTANT!** Keep in mind that Address, Private Key, Password, Keystore file are extremely confidential! Anyone who owns your address can check the balance of your account at any given moment. And whoever owns your Private Key can do with your funds whatever he wants.

6. A last important step is to add Dentacoin as a Custom Token in your wallet so you can check the amount of Dentacoins you own. This is done as follows:

6.1. Below the Account Balance section on the right side of the page, you will see the Token Balances section. Click the "Add Custom Token" button.

6.2. In the fields Address, Token Symbol, Decimals, enter the following:

Token address: 0x08d32b0da63e2C3bcF8019c9c5d849d7a9d791e6

Token symbol: DCN

Decimals: 0

6.3. Click the Save button. And you're done. You can now see your Dentacoin balance.

7. From here on, every time you want to enter your wallet, the steps are as follows:
- 7.1. Go to [www.myetherwallet.com](https://www.myetherwallet.com).
  - 7.2. Click the Send Ether & Tokens section in the top menu.
  - 7.3. Select the option to unlock your wallet using the Private Key, then place the Private Key in the specified field.
  - 7.4. You will see the "Unlock" button again - click on it. You are already in your wallet.

<https://www.myetherwallet.com/#send-transaction>

The screenshot shows the MyEtherWallet interface. The top navigation bar includes the MyEtherWallet logo, version information (v3.5.0), language (English), and network (ETH-beta). The main menu has options: Generate Wallet, Send Ether & Tokens (highlighted), Swap, Send Offline, Contracts, View Wallet Info, and Help. Below the menu, the page title is '- Send Ether & Tokens'. The main content area is titled 'How would you like to access your wallet?' and lists several options: Keystore File (UTC / JSON), Private Key (selected with a red arrow), Mnemonic Phrase, Parity Phrase, Ledger Nano S, and TREZOR. To the right, there is a section titled 'Paste/Type Your Private Key' with a large text input field and a red arrow pointing to it. Further right, under the heading 'Unlock your Wallet', there is a blue 'Unlock' button with a red arrow pointing to it.

8. You can also unlock your wallet using the generated Keystore file. The steps are as follows:
- 8.1. Go to [www.myetherwallet.com](https://www.myetherwallet.com).
  - 8.2. Click the Send Ether & Tokens section in the top menu.
  - 8.3. Select the option to unlock your wallet using Keystore File (UTC / JSON), then upload this file and enter the password generated by the time of the wallet creation (the one with at least 9 characters).
  - 8.4. You will see the "Unlock" button again - click on it. You are already in your wallet.

The screenshot shows the MyEtherWallet interface for version v3.8.8. The top navigation bar is similar to the previous one, but the network is now 'ETH (MyEtherWallet)'. The main menu highlights 'Send Ether & Tokens'. The page title is '- Send Ether & Tokens'. Under the heading 'How would you like to access your wallet?', the 'Keystore File (UTC / JSON)' option is selected with a red arrow. To the right, under the heading 'Select Your Wallet File', there is a button labeled 'SELECT WALLET FILE...' which is circled in red with a red arrow pointing to it. Below this button is a text input field with a red arrow pointing to it. To the right of the input field, there is a section titled 'Unlock your Wallet' with a blue 'Unlock' button and a red arrow pointing to it. A red arrow also points down to the 'Unlock' button from the 'SELECT WALLET FILE...' button.
